

REDUCES CHLORINE

Chlorine and chloramines are used by the city to help 'sanitize' the water coming into your home. Repeated exposure to these chemicals negatively impacts your skin, hair, health, and food. You've noticed that your water sometimes tastes and smells unpleasant. You've smelled chlorine vapors while bathing or drinking your water.

FILTERS CHEMICALS

You and your loved ones are exposed to the harmful chemicals, pesticides, solvents, and metals that are present in your city water. Drinking, bathing, and cooking with these chemicals is dangerous and may cause health problems and other troubles.

REMOVES SEDIMENT

Sand, sediment, and debris can come from the water lines that supply your water from the city. Leaking pipes introduce untreated water or debris that seep, contaminate, drain, or flow into the water supply. This sediment in city or well water can clog faucets, damage appliances and even change the taste of your drinking water.

PREVENTS 99.6% OF SCALE

You have hard, mineral filled water that causes scale and corrosion to build up, leaves soap scum residue behind in your bathrooms, dingy, hard feeling clothes, dry irritated skin, life-less dull hair, and etched, spotty glassware.

GREEN BY DESIGN

The Enviro Water Products Pro RO uses the latest in system design and membrane technology to reduce the amount of water down the drain by 50%. It is smaller and uses significantly fewer resources in the manufacturing process than the typical 5-stage RO systems and offers a 6th stage most don't offer. Smaller packaging and a lighter shipping weight further reduce impact on the environment.

BENEFICIAL MINERALS ADDED BACK

The Enviro Water Products Pro RO 2-stage post filter offers a carbon/mineral filter inside that adds back in the essential minerals (calcium & magnesium) to your drinking and cooking water which are removed from RO systems and Ultra filtration systems.

EASY TO MAINTAIN

Yearly maintenance is quick and easy. Simply remove the cover and replace one cartridge – no complicated plumbing connections, no tools required.

SMALL & LIGHTWEIGHT

The Enviro Water Products Pro RO is much smaller and lighter than the typical reverse osmosis system. The complete system, including tank, is approximately the same height and width as a standard 2-gallon tank and is less than 14 inches in depth. This smaller footprint makes it easier to install in a cramped kitchen or bar cabinet.
